fsmb FEDERATION OF STATE MEDICAL BOARDS

Introducing FSMB Integration: Elevating Provider Credentialing

Discover how our new partnership with the Federation of State Medical Boards (FSMB) enhances our credentialing platform. This guide will walk you through the benefits of accessing FSMB's comprehensive physician data directly through our system, streamlining your verification processes and ensuring up-to-date, reliable information for all your providers.

Enhanced Provider Verification with FSMB Integration

We're thrilled to announce that Modio's OneView platform now includes data from the Federation of State Medical Boards (FSMB) Physician Data Center.

This integration offers you:
- Up-to-date information on provider licenses
- Reports on any actions taken against those licenses

Key Benefits:
- **Comprehensive verification**: Combine FSMB data with our existing OIG and SAM integrations for thorough provider screening.
- **Streamlined process**: Access FSMB results directly within your OneView provider roster.
- **Trusted source:** FSMB is a respected authority for physician data.

About FSMB

FSMB's Physician Data Center brings together data collected and shared by state medical and osteopathic boards and makes it easily and centrally accessible for licensure verification and disciplinary alerts. Their work also benefits providers by:

- **Streamlining the licensing process:** FSMB's Federation Credentials Verification Service (FCVS) is a fast and convenient way for physicians and PAs to create a lifetime repository of their primary-source verified credentials.
- **Enhancing data accessibility**: FSMB provides a centralized platform for accessing and sharing physician data, which can be used for various purposes like hospital privileges, employment, and professional memberships.
- **Promoting patient safety:** FSMB supports the crucial work of state medical boards in ensuring public health and safety.

Accessing FSMB

Getting Started:

- You will need to sign an agreement with FSMB to access their API.
- Each report will incur a fee, billed through the FSMB's Physician Data Center.

There are two ways to access physician data through OneView V2, depending on your existing accounts:

New to FSMB Physician Data Center (PDC)?
Create a PDC Account: You will need an account with PDC to access their data and be invoiced for each query. Click here to get started or learn more in their FAQs.

Already Have an Active PDC Account?
Request an API Key: If you have an active account, you can request an API key by emailing pdc@fsmb.org. Once your Modio account manager receives the key, they'll help you set up the updater in your FSMB grid on OneView V2.

Frequently Asked Questions

Q: How do I get access to the FSMB integration?

A: Use of this integration requires an agreement with the FSMB Physician Data Center, as they will process the costs for pulling each report. If you don't have a signed agreement, email pdc@fsmb.org and let them know that you are a Modio client and need to sign up for the Physician Data Center. Once you have an account with FSMB, email them to request credentials for the API. Your email message should indicate that you need "PDC API" credentials generated for Modio OneView and sent back to you. The expected turnaround time with FSMB is 2 business days, but you are responsible for monitoring this timeline and following up with FSMB. Once the credentials are acquired, email support@modiohealth.com to finish setting up the integration.

Q: What happens if I don't have the required data to run a search?

A: The FSMB's Physician Data Center requires us to provide an accurate name, graduation year, date of birth, and SSN to find a match. If any search criteria are missing, the updater icon will be greyed out. If the data on the profile does not have a match in the FSMB database, then Carbon will indicate "Record Not Found."

Q: What is the difference between the FSMB Find feature and this grid?

A: Users may be familiar with the FSMB Find Feature available in the State Licenses grid. Using the magnifying glass icon in this grid will use the provider's name to search for possible license matches and present records that are not already on the profile. Once selected, records will be added to the grid to be run through Carbon. The FSMB grid does not return any new records, but the FSMB report generated by a successful run will be added to the provider's documents and includes a list of licenses held by the provider and other provider data.

Q: Can I run the FSMB updater or see FSMB results in V1?

A: FSMB is a V2 only updater. However, any documents that you produce as part of an FSMB verification will be accessible in the Documents section of the provider profile in both V1 and V2.
